HydroSeal

HydroSeal is a clinically proven product offering of disposable Shower Barriers and Cast Covers that help prevent infections of IV Sites and Wounds.

HydroSeal

Shower Protection

Keep PICC Lines, IV Sites, Dressings and Casts Dry During Showering.

HydroSeal is a single use disposable shower barrier that covers and prevents all dressings, IV sites, and casts from water exposure during a shower.

Meets CDC Guidelines for showering

Centers for Disease Control and Prevention Guidelines for the Prevention of Intravascular Catheter-Related Infections state showering is permitted if precautions can be taken to reduce the likelihood of introducing organisms into the catheter. *(e.g., if the catheter and connecting device are protected with an impermeable cover during the shower).*

The HydroSeal Advantage

- Reduce costs
- Reduce the risk of infection
- Quick and Easy Application with Performance Enhanced Tabs
- Waterproof and Leakproof Design
- Consistent patient comfort and satisfaction

HydroSeal

Glove/Sleeve

Innovative design allows for a one handed application and features a convenient push button release on the buckle for ease of removal. Can be used for any application on hand and arm sites.

Can also accomodate casts!

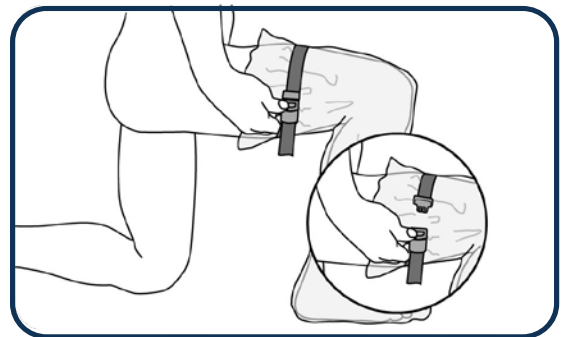

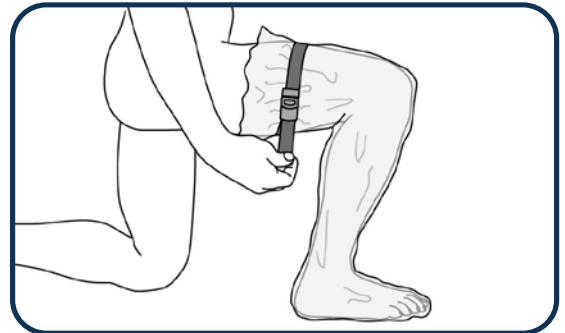

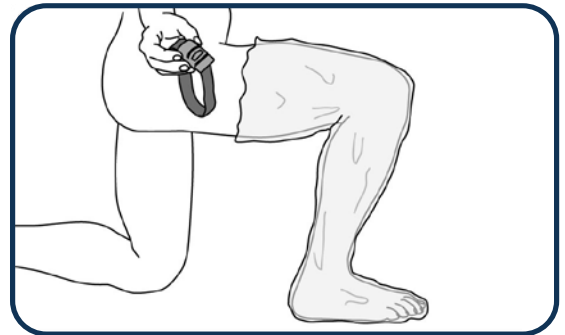

Cat#	Pack	Desc.	Applications
HSGS-100	3/pack	Glove/Sleeve, Strap	Hand, Arm, Cast

HydroSeal

Boot

This new design can be used for any foot or leg site and can also be used over casts. Using the same type strap as the Glove/Sleeve, the HydroSeal Boot has many applications. A featured non slip textured film enhances patient safety while a push button release allows for a one handed application.

Cat#	Pack	Desc.	Applications
------	------	-------	--------------

HSBT-100	3/pack	Boot, Strap	Foot, Leg, Casts
----------	--------	-------------	------------------

HydroSeal

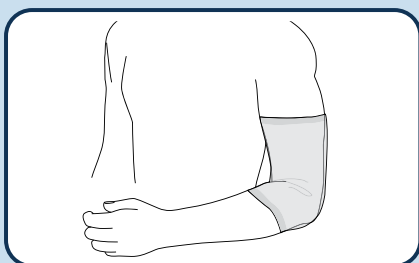

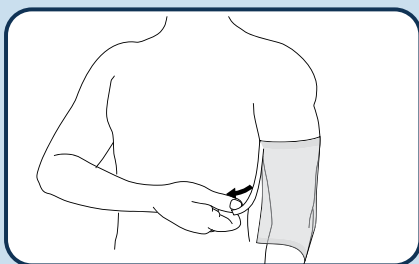

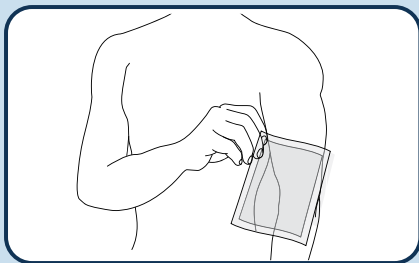

Flex

HydroSeal Flex is a next generation product that utilizes a flexible and stretchable film to provide exceptional patient comfort and greater ease of use optimizing patient outcomes. The stretchable, flexible film allows full range of motion while preventing leakage.

HydroSeal Flex,

Available in a 7"x9" "Hybrid Size",

This is an important component in the design. Many times clinicians opt to use a larger size (ie 9'X9") shower barrier for PICC sites in an effort to provide coverage above the PICC insertion site. This can present an issue for some patients as the film may "overwrap" around the arm and adhere to the other side of the film.

We have the solution.

HydroSeal Flex utilizes a Hybrid size 7"x9". For proper application use the 9" side for the vertical axis and 7" side for the horizontal axis.

Latex and DEHP Free

FDA Registered

ISO 13485:2003 Standards Certification
