Sapphire™ Infusion Set Portfolio Updates Include a Variety of Enhancements

Over the course of 2017 and 2018, we have been incorporating ICU Medical-manufactured sets into our Sapphire™ infusion set portfolio. This process included enhancements to set components, product labeling, product packaging, case pack size, and more.

The table below provides an overview of some of the modifications that have been implemented.

The ICU-manufactured sets include new configurations as well as updates to sets. We have also incorporated enhanced Sapphire accessories into our portfolio with improved robustness to enhance customer satisfaction. See the following pages for details.

NOTE: Sapphire infusion sets are intended for use on Sapphire pumps. R̶ Only. For safe and proper use of these devices refer to the Instructions for Use.

Set Feature	Set Benefit
Blister to pouch packaging (i.e., sterile content to sterile fluid path)	Easier-to-open packaging
Increased pack size	Fewer cartons mean less packaging waste
Incorporation of in-house standard components	Helps improve continuity of supply
Labeling enhancements (i.e., enlarged font size; prominence of IFUs)	Improved legibility of product titles and Instructions for Use

NRFit™ Sapphire Sets Now Available
Enable Safer Neuraxial Therapy Connections

New International Organization for Standardization (ISO) standards are in place supporting safer neuraxial therapy connections, known as the ISO 80369-6 series, or NRFit connectors. NRFit connectors enable safer infusion line connections by standardizing unique connectors for specific therapies, like epidural deliveries. Epidural sets using universal "luer lock" connectors can now be replaced with sets containing the NRFit, helping to reduce misconnections that may lead to medication errors.

NRFit Sapphire epidural sets are available now and are designed to help improve patient safety in neuraxial anesthesia therapies.
