

Get in compliance with USP <800> with one easy solution!

Beginning December 1, 2019, pharmacies, hospitals, home infusion companies, oncologists, veterinarians, and other healthcare facilities that handle hazardous drugs (HD) must have USP <800> compliant spill kits on-site. This regulation is an effort to protect workers in the event of accidental spills of HDs. The requirement is part of USP General Chapter 800¹, which “describes the practice and quality standards for handling hazardous drugs.”

Sharps Compliance is introducing the Hazardous Drug Spill Control Kit™ for the safe cleanup and disposal of spilled chemotherapy and other hazardous drugs.

Who needs a spill kit?

All healthcare personnel who handle hazardous drug preparations and all entities that store, prepare, transport, or administer hazardous drugs must be trained on spill management and have spill kits readily available.

What is included in the Sharps Compliance Hazardous Drug Spill Control Kit?

Our Hazardous Drug Spill Control Kit is an all-in-one solution for cleaning up hazardous drug spills. This base-level kit contains the minimum components required by USP <800> to clean up an HD spill.

- ▶ Absorbent powder
- ▶ Absorbent pad
- ▶ Chemosorb pad
- ▶ Scraper/scooper
- ▶ Antiseptic towel
- ▶ Safety goggles
